Autism has unique vocal signature, new technology reveals

LAWRENCE — A new automated vocal analysis technology could fundamentally change the study of language development as well as the screening for autism spectrum disorders and language delay, reports a study in the July 19 online Proceedings of the National Academy of Sciences.

The LENA (Language Environment Analysis) system automatically labeled infant and child vocalizations from recordings and thereafter an automatic acoustic analysis designed by the researchers showed that pre-verbal vocalizations of very young children with autism are distinctly different from those of typically developing children with 86 percent accuracy.

The system also differentiated typically developing children and children with autism from children with language delay based on the automated vocal analysis.

The researchers analyzed 1,486 all-day recordings from 232 children (or more than 3.1 million automatically identified child utterances) through an algorithm based on the 12 acoustic parameters associated with vocal development. The most important of these parameters proved to be the ones targeting syllabification, the ability of children to produce well-formed syllables with rapid movements of the jaw and tongue during vocalization. Infants show voluntary control of syllabification and voice in the first months of life and refine this skill as they acquire language.

The autistic sample showed little evidence of development on the parameters as compared to typically developing children.

What Automated Vocal Analysis Reveals About the Vocal Production and Language Learning Environment of Young Children with Autism

Steven F. Warren · Jill Gilkerson · Jeffrey A. Richards · D. Kimbrough Oller · Dongxin Xu · Umit Yapanel · Sharmistha Gray

© Springer Science+Business Media, LLC 2009

Abstract The study compared the vocal production and language learning environments of 26 young children with autism spectrum disorder (ASD) to 78 typically developing children using measures derived from automated vocal analysis. A digital language processor and audio-processing algorithms measured the amount of adult words to children and the amount of vocalizations they produced during 12-h recording periods in their natural environments. The results indicated significant differences between typically developing children and children with ASD in the characteristics of conversations, the number of conversational turns, and in child vocalizations that correlated with parent measures of various child characteristics. Automated measurement of the language learning environment would be a valuable supplement to language assessment interviews and measures of vocalization.

Introduction

Evidence of the role that adult input plays in child language development has been accumulating over several decades (Bruner 1981; Chapman 2000; Gallaway and Richards 1994; Hart and Risley 1995; Huttenlocher et al. 1991; Rowe 2008). It has been widely observed that from birth onward children are exposed to a large amount of language on a daily basis. Furthermore, the millions of words and sentences that children experience are not just undifferentiated noise. Much of this natural curriculum is specifically adjusted and fine-tuned to the child’s language level (Baumwell et al. 1997; Briner 1981; Chapman 2000; Hart and Risley 1999; Sokolov 1993). Adults naturally utilize a
I searched for a free copy of the SpringerLink article and found it. . .but why was it free? More research took me here: the author is associated with this foundation and full text was here—a citable site with more excellent resources to use.

MultiMedia Sites: Research Worthy
Congratulations Jamie Oliver – 2010 TED Prize Winner

Jamie Oliver’s Wish

“I wish for your help to create a strong, sustainable movement to educate every child about food, inspire families to cook again and empower people everywhere to fight obesity.”

The Plan

Set up an organization to create a popular movement that will inspire people to eat. The movement will do this by establishing a network of community kitchens travelling food theater that will teach kids practical food and cooking skills in an provide basic training for parents and professionals; and bringing millions of people an online community to drive the fight against obesity. The grassroots movement challenge corporate America to support meaningful programs that will change the way we think about food.

The Needs

- Help to establish the organization, with funding, office space and facilities
- Find partners to equip and run the community kitchens, and food suppliers to provide the fresh ingredients.

Ted.com is the place for information providers to go if they are looking for presentations by creative folk talking about the work they are passionate about. This fascinating site covers an array of topics that we could use for our own edification, to share at staff retreats, classes. I wanted to find a multimedia resource that relates in some way to the recovery of Greensburg. I found Jamie Oliver. The world of rural Greensburg, Kansas is certainly open for Mr. Oliver’s insight on food education.

The Top 100 Tools for Learning 2010 list is emerging

Voting for this year's Top 100 Tools for Learning has been underway for just over a month. At the time of writing this blog there have been 277 entries, which means the list is off to a good start. And from the number of tweets, it appears this is becoming a popular resource for around the world. So here's just an update on the list so far.

The Top 5 tools are currently

1. Twitter
2. YouTube
3. Google Docs
4. Delicious
5. Slideshare

So, let's add our top 10 Tools for Learning 2010!
FINDING ELECTRONIC DISSERTATIONS
NDLTD UNION CATALOG

A collaborative effort of the NDLTD, OCLC, VTLS, and Scirus, the NDLTD Union Catalog contains more than one million records of electronic theses and dissertations. For students and researchers, the Union Catalog makes individual collections of NDLTD member institutions and consortia appear as one seamless digital library of ETDs. The NDLTD provides free resources to contribute your institution’s metadata - click to learn more about the Union Catalog project.

SEARCH and BROWSE ETDs

Two tools have been developed specifically to search and browse the NDLTD Union Catalog. Other valuable tools have been developed for searches focused on specific countries or regions. Select the tool below that meets your needs.

Search tools developed for the NDLTD Union Catalog

Scirus ETD Search

A comprehensive scientific research tool from Elsevier, Scirus ETD Search provides an advanced search that can narrow results to theses and dissertations as well as provide access to related scholarly resources.

VTLS Visualizer

This is a dynamic search and discovery platform with sophisticated functionality. You can sort by relevance, title, and date. In the current implementation, faceted searches are available by language, continent, country, date, format and source institution. Additional facets, such as subjects or departments, can be added if desired.
Out of Disaster: The Role of Architecture in Disaster Recovery

Authors: STRICK, SUSAN LEIGH
Date/Publisher: 2008 by University of Cincinnati / OhioLINK
Subjects: disaster | recovery | architecture | psychology | greensburg | kansas | tornado | art therapy

Description 1: Environmental disaster is a worldwide concern, as images of devastation, suffering, and death caused at the hands of Mother Nature appear in the headlines nearly daily. Millions of people are affected by disasters each year. While disasters cannot be stopped, the reaction to and recovery from devastation can be changed to better facilitate the survival and recovery process. This thesis seeks to understand the physical and psychological needs of disaster survivors, as well as personal identity.
