- Developed Ning networks for projects at KU and ESU
An Update from Ning

Posted by Jason Rosenthal on April 16, 2010 – 3:13 pm

Hi Everyone,

As many of you know, we made a decision yesterday to focus 100% of the company on enhancing the features and services we offer to paying Ning Creators. The tens of thousands of you who already use our paid service represent over 75% of our traffic, and we’ve heard repeatedly from you ways that we can deliver a killer service to help make your Ning Network more effective. Some examples of things we are working on that you’ve asked for include new APIs, a new mobile experience and new advertising and revenue opportunities.

As part of this change, we’ll be phasing out our free service. On May 4, 2010, we will share with you all of the details of our new offering, including features and price points, through a series of blog posts, emails, and conference calls. We recognize that there are many active Ning Networks for teachers, small non-profits, and individuals and it’s our goal to have a set of product and pricing options that will make sense for all of them. For Ning Creators using our free service who choose to move to another service, we will offer a migration path and time to make that change. We will still continue to allow free trials and test networks on the Ning Platform.

We look forward to talking to you further on May 4th.
July 20, 2010
You have received this email because you created a Ning Network.

NING Now

Last week our three new plans went live. Many of you chose to upgrade immediately to take advantage of our new features and get your transition out of the way early. If you haven’t chosen a plan yet, your three choices will remain available until August 20, 2010. Today, we want to give you some insight into the new plans, provide you with some additional ways to include music on your Ning Network, and highlight some of your most urgent questions.

John McDonald
VP, Advocacy

TOP 5 QUESTIONS
Got a question about the new plans? We’ve collected the most popular questions we’re hearing on Creators.

• How do I buy?
• Am I going to lose features?
• What happens to my content?
• When should I switch?
• No credit card. What can I do?

HAVEN’T UPGRADED TO MINI, PLUS OR PRO?

Nice things about Elgg and BuddyPress:

- Open Source (free)
- Written in PHP
- Relatively easy to configure
- Good functionality out of the box
- Plugin architecture
- Hosting options available
Caveats:

- No clean way to export from Ning into Elgg (yet)
- You need server access
- You need some tech know-how
- Yet-another-social-network
Setup:

- Download Elgg or BuddyPress
- Configure your web server
- Add the database
Enter your database settings below and hit save:

- **Database user**: ruralocityelgg
- **Database password**: 
- **Elgg database**: ruralocity_elggdemo
- **Database hostname (usually 'localhost')**: ruralocity-elggdemo.rura
- **Database table prefix (usually 'elgg_')**: elgg_

[Save]
System settings

Elgg's database was installed successfully.

Now that the Elgg database has been successfully installed, you need to enter a couple of pieces of information to get your site fully up and running. We've tried to guess where we could, but you should check these details.

The name of your site (eg "My social networking site"):

SIDLIT 2010 Network

Short description of your site (optional)

A demonstration network for the SIDLIT conference.

Site email address (used when sending system emails)

asumner@ku.edu

The site URL, followed by a trailing slash:

http://localhost:8888/elgg/

The full path to your site root on your disk, followed by a trailing slash:

/Applications/MAMP/htdocs/elgg/

The full path to the directory where uploaded files will be stored, followed by a trailing slash:

/Applications/MAMP/elggdata/
Enter the view which will be used as the default for your site or leave this blank for the default view (if in doubt, leave as default):

```
default
```

The default language for your site: English

The default access permissions: Logged in users

Debug mode provides extra information which can be used to diagnose faults. However, it can slow your system down so should only be used if you are having problems:

```
Turn off debug mode (recommended)
```

Enable this to have user logins performed over HTTPS. You will need to have https enabled on your server for this to work.

- [ ] Enable HTTPS logins

The RESTful API is a flexible and extensible interface that enables applications to use certain Elgg features remotely.

- [x] Enable the RESTful API

Save
Your initial configuration settings have been saved. Now register your initial user; this will be your first system administrator.

Welcome to Elgg's plugin directory.

What are plugins?
Plugins extend your Elgg site by adding additional functionality, languages and themes. They are contributed by members of the Elgg community.

To get started you could either browse the available plugins, or search for a specific one, upload one of your own, or rate & comment on others.
